# I·low can we help?

We hear on the news about a "manure spill, manure leaking into creek, a lake, a pond, or seeping into a water supply. These events are never to be taken lightly. I would also make the assumption that following the headlines comes hefty fines. Many times these unfortunate events can be prevented by performing regular maintenance on a slurry.

Here are a few simple steps you can take to prevent your name from making headline news—Starting with frequent inspection of the slurry tank.

Semi annually, when the tank is empty, check the cathodic protection system. If the cathodic bars are depleted or gone, they need to be replaced to prevent holes from developing on the tank. Frequently inspect seals and sealant around pipe connections, side mount pumps, manways, etc. for gaskets and sealer. Replace areas that show deterioration or wear.

American Engineered Tanks can provide replacement parts, tank inspections and make recommendations for future maintenance and repair considerations before you become the headline news.

#### Around the Bend

We have had a very busy spring! American Engineered Tanks, LLC. Has been in the process of moving from the Menomonie, WI location to our Downing, WI shop since March. Our new facility offers more space, a larger shop and more secure storage. Along with a move there are all the other fun jobs, such as intense inventory and organization occuring. It won't take Jon, Dan and Brian long to have it all accounted for.

### **Back Lot**
